

medications. Genital herpes is typically a result of the HSV2 (herpes virus type 2) virus, while cold sores are usually caused with the HSV1 (hsv simplex virus type 1) virus. SSRI drugs are widely-used for depression and bipolar disorder (12). HSV infections spread from person to an alternative through direct contact with a blister or infected body fluid. Over-the-counter pastes such as Orabase, Aphthasol and Lidex or Vanos can relieve pain and encourage healing. </p>
